# JOINING UCONNECT WIFI ON A WINDOWS DEVICE

Select **Control Panel** > **Wi-Fi** > **"UConnect"** wireless network

Select Network and Sharing Center

If you have previously attempted to connect to this network unsuccessfully, please right-click on and "Forget the network".
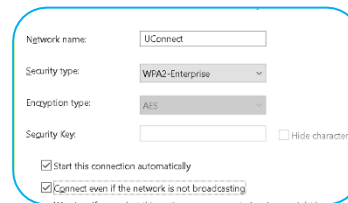

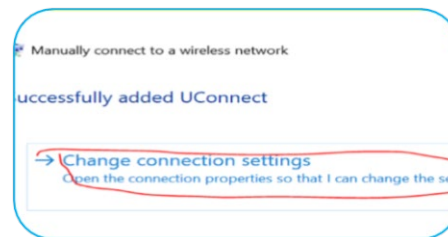

Select **Set up a new connection or network**

Select **Manually connect to a wireless network** (note: case and character specific)

Enter **UConnect** for name and Select **WPA2-Enterprise** Security type And then next.
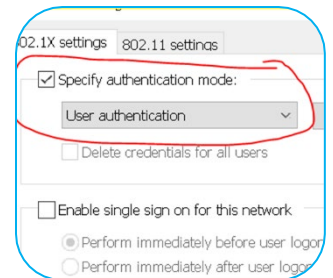

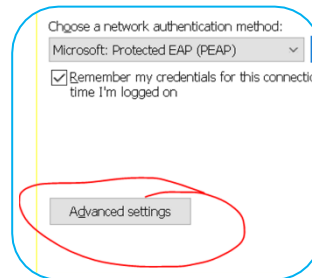

You are now connected to UConnect. You will be prompted to change your Certificate and authentication settings by selecting **Change connection settings**.

Select the Security tab and then **Settings** under network Authentication method. Unselect **Verify the server's identity by validating the certificate.** Select **OK**.

Now select **Advanced settings** and change **Specify authentication mode** to **User authentication.** Select **OK**.

You should now be able to go to your list of networks and select **UConnect**. Enter your credentials to connect.
