844.YES.PREP

Pre-exposure prophylaxis, or PrEP, is a way for people who do not have HIV to prevent HIV infection by taking a pill once day. When taken consistently, PrEP has been shown to reduce the risk of HIV infection in people who are at high risk by up to 92%.

Post-exposure prophylaxis, or PEP, involves taking antiretroviral medicines as soon as possible after you may have been exposed to HIV, to try to reduce the chance of becoming HIV-positive.

PrEP and PEP are available in your area. Call to learn more.
