

University of Mississippi Medical Center Psychology Internship Training Program

2019-2020 Training Year

University of Mississippi Medical Center Psychology Internship Training Program
Division of Psychology, Department of Psychiatry and Human Behavior
University of Mississippi Medical Center
2500 N. State St.
Jackson, MS 39216-4505
(601) 984-5855

Program Website:

<https://www.umc.edu/psychology-internship/>

Applications due: November 1, 2018

Interview notification date: December 1, 2018

Interview dates: January 3, 4, 10, 11, 17, 18, 24, and 25

Training Director: Dr. Crystal S. Lim, Ph.D.

Accreditation Status:

The Internship (Residency) Program is accredited by the Commission on Accreditation of the American Psychological Association. The next site visit will be during Spring 2018. The Commission can be contacted at:

American Psychological Association
750 First St., NE, Washington, DC 20002
Phone: (202) 336-5979
E-mail: apaacred@apa.org
Web: www.apa.org/ed/accreditation

Program Overview and Structure:

The University of Mississippi Medical Center Psychology Internship (Residency) Training Program is housed in the Division of Psychology in the Department of Psychiatry and Human Behavior at the University of Mississippi Medical Center (UMMC). Versions of the program have been accredited by the American Psychological Association since its inception in 1964. The program was most recently accredited as a consortium with the local VA. However, on July 1, 2017 began operating as an independent program. In Spring 2018 the UMMC Psychology Internship Program will undergo an accreditation site visit to seek accreditation as an independent internship training program. The UMMC Training Program offers a wide variety of clinical and research opportunities during the internship year, which are consistent with the Program's training goals for interns. Although clinical training activities play a paramount role in our program, interns are expected to actively maintain involvement in research. Continuing education seminars, grant writing seminar, dissemination and implementation curriculum, and professional academic development didactics comprise an additional important component of training.

Training Goals/Objectives for Interns:

Goal #1 – Interns will be competent in assessment, intervention, supervision, and consultation skills.

Objective: By the end of the training year, psychology interns will be competent in assessment, intervention, supervision, and consultation skills as evidenced by at least high intermediate skill (requiring minimal supervision) in the following domains by the end of the internship year:

- Assessment
- Intervention
- Supervision
- Consultation and Interprofessional Skills

Goal # 2 – Interns will be skilled in the interface between science and practice.

Objective: Production of psychology interns who will be skilled in the interface between science and practice by applying scientific knowledge to the clinical setting, being educated consumers of empirical research and participating in active research projects and/or program evaluation as evidenced by demonstration of at least high intermediate skill (requiring minimal supervision) in the following domain by the end of the internship year:

- Research

Goal #3 – Interns will be competent in individual and cultural differences and diversity.

Objective: By the end of the training year, psychology interns will demonstrate diversity-related competencies including, but not limited to, age, disability, ethnicity, gender, gender identity, language, national origin, race, religion, culture, sexual orientation, and socioeconomic status as evidenced by demonstration of at least high intermediate skills (requiring minimal supervision) in the following domain by the end of the internship year:

- Individual and Cultural Diversity.

Goal #4 – Interns will display professional and ethical behavior.

Objective: By the end of the training year, psychology interns will demonstrate professional and ethical behavior. Interns will adapt professional behavior in a manner that is sensitive and appropriate to the needs of diverse clients, colleagues, and organizations as evidenced by at least high intermediate skill (requiring minimal supervision) in the following domains by the end of the internship year:

- Professional Values, Attitudes, and Behaviors
- Ethical and Legal Standards

Goal #5 – Interns will be competent in teaching and expressive skills

Objective: Production of psychology interns who by the end of the training year will demonstrate knowledge of didactic learning strategies, be able to apply teaching methods to multiple settings, and have verbal, nonverbal, and written communications that are informative, articulate, succinct, well-integrated, and demonstrate thorough grasp of professional language and concepts as evidenced by at least high intermediate skill (requiring minimal supervision) in the following domain by the end of the internship year:

- Communication and Interpersonal Skills

In addition to these general competencies, the Program provides opportunities to develop specialized competencies (e.g., MI, dissemination, etc.) through our various training rotations and curricular offerings.

Training Model:

The UMMC Training Program endorses a cognitive-behavioral orientation within a scientist-practitioner model. Interest in, and experience with, this approach are important selection criteria. Interns gain clinical experience

with a wide variety of patient populations and across multiple settings through inpatient, outpatient, and community placements.

The internship year is divided into 3 four-month rotations. Currently, 9 clinical rotations are available (See Rotations below), each serving different populations and providing unique services. Rotation assignments are made based on interns' rankings and Training Program faculty input based on intern's training needs and clinical goals. Interns provide rankings twice during the year, prior to the start of internship and in September, to allow for experiences with the first rotation to be considered before making choices for the second and third rotations. Rotations are divided into Child and Adult emphasis areas. Interns are encouraged to gain experiences within both emphasis areas. Clinical supervision and training are conducted on a one-on-one or small group basis within each clinical rotation.

Additional clinical opportunities occur through the General Psychology Clinic, where interns gain experience working with longer-term outpatient cases, and can receive supervision from Training Program psychology faculty other than their rotation supervisors. Interns are expected to accumulate at least 500 face-to-face clinical hours during the internship year, with 86 of those contacts occurring through the General Psychology Clinic. A unique aspect of clinical experiences offered through the Training Program includes the racial/ethnic and socioeconomic diversity of patient populations served at UMMC. The Mississippi Psychology Internship Training Program currently has 6 internship slots, with about half of the slots having an adult emphasis and half having a child emphasis.

To facilitate growth and successful progress in the program, interns receive formal evaluative feedback on their progress on training goals/objectives during each rotation and at the mid- and end-points of the training year. They must demonstrate performance at the high intermediate level on all competencies to complete internship.

Rotations:

The UMMC Psychology Internship Training Program offers clinical rotations in both child and adult emphasis areas. Interns are encouraged to participate in rotations in both areas. Some rotations offer both half-time (14 hrs/week) and full-time (28 hrs/week) experiences, as well as several mini-rotation (4-8 hrs/week) opportunities. The rotation descriptions provide specific information about which options are available for each rotation.

Child-Focused Rotations:

**Center for the Advancement of Youth
Pediatric Psychology, Pediatric Hematology/Oncology and Pediatric Obesity Focus
Neuropsychology**

Adult-Focused Rotations:

**Administrative
Adult Inpatient, Dialectical Behavioral Therapy Skills Emphasis
Adult Inpatient, Substance Use Disorder Emphasis
Community-Based Dual Disorder
Helping HAND
Methodist Rehabilitation Neuropsychology/Behavioral Medicine
Neuropsychology**

Rotation Descriptions:

Child-Focused Rotations

Center for the Advancement of Youth Rotation, Dr. Sutton (primary supervisor), Drs. Elkin, Sarver, and

Annett: This rotation provides extensive training with diverse pediatric populations within the Center for Advancement of Youth (CAY) and Child Development Clinic (CDC). Residents will participate in a fully integrated multidisciplinary clinic and be provided with opportunities for psychological assessments and interventions that include infants through adolescents, including those with potential medical co-morbidities. The CAY/CDC clinic offers several experiences among which the resident may participate in based on interest and availability. Assessment opportunities include: (1) interdisciplinary (psychology/developmental pediatrician) brief diagnostic and treatment planning assessments for youth with developmental or emotional-behavioral difficulties and (2) comprehensive neurocognitive and psychological evaluations for a wide range of learning, developmental and psychological conditions. (3) Early childhood/infant developmental assessment. Treatment opportunities include: (4) Evidence-based behavioral interventions for children and parents with ADHD, neurodevelopmental conditions (e.g., autism), or disruptive behavior disorders including Parent-Child Interaction Therapy (preschoolers) or parent-management training delivered in clinic or in a weekly evening parenting group (children/adolescents); (5) Comprehensive Behavioral Intervention for Tics (CBIT) in an interdisciplinary (pediatric neurologist and psychologist) and individual treatment settings; (6) provision of evidence-based therapy for mood, anxiety and externalizing behavior. Some services are provided through telehealth as well. Overall, this rotation emphasizes diagnostic and intervention skills necessary for future career opportunities in pediatric and child/adolescent psychology.

Pediatric Psychology Rotation, Pediatric Hematology/Oncology and Pediatric Obesity Focus; Primary Supervisors: Dr. Karlson, Dr. Lim:

This rotation provides extensive training with pediatric populations in a variety of settings and clinics affiliated with UMMC. The Pediatric Cancer experiences take place in the Multidisciplinary Pediatric Craniofacial Clinic, Children's Cancer Outpatient Clinic, Batson Children's Hospital Pediatric Hematology/Oncology Inpatient Unit, and Multidisciplinary Pediatric Brain Tumor Clinic. Interns participate in consultation and liaison services for UMMC pediatric treatment teams, conducting supervised neuropsychology assessments and psychological interventions for inpatient and outpatient populations with a number of different presenting medical diagnoses (cancer, sickle cell, stroke, genetic conditions, craniofacial conditions, etc.). Two unique aspects of behavioral pediatrics are (1) the exceedingly wide range of problems seen by interns including internalizing, externalizing, and learning disorders, and (2) the relatively brief time frame in which assessment and treatment can take place. This aspect of the rotation emphasizes the diagnostic and treatment skills necessary for handling, in a timely manner, the wide range of cases presented in a pediatric/hospital setting. Interns have addressed problems such as adjustment, adherence to medical regimen, adaptive functioning, disruptive behavior, feeding problems, sleep problems, toileting, pain management, grief, and other areas. The clinical goals of the Pediatric Obesity experience are for residents to demonstrate adequate knowledge of child health and development, psychological co-morbidities, and cognitive behavioral theory to effectively implement evidence-based assessments and psychological treatments with children who are obese and their parents. An additional focus is to gain experience implementing psychological treatments in an outpatient multidisciplinary medical clinic with children who are obese with medical comorbidities and their parents. Interns will also develop effective communication and consultation skills while working with families and a variety of health care professionals, as well as gain exposure to the process of conducting clinically based research in an outpatient pediatric medical setting. Interns are involved in providing supervised psychological diagnostic evaluations and health and behavior focused assessments, as well as delivering evidence-based treatments to address psychological disorders to children and their families seen in the clinic. Interns have the opportunity to participate in individual and group-based treatments with patients and families, as well as opportunities to participate in providing services through the use of telehealth. Children seen in the clinic present with a wide-variety of psychological symptoms, such as internalizing and externalizing problems, coping with weight-related teasing, anxiety, depression, ADHD, and oppositional/conduct disorders. The Pediatric Psychology Rotation is offered as a full-time rotation experience.

Neuropsychology Rotation, Dr. Manning: Consultation service is provided to medical specialties including UMMC Pediatric and Adult Neurology, Pediatric and Adult Neurosurgery, Trauma, Pediatric and Adult Psychiatry. Patient population ranges from children to senior adults. Diagnoses are for acute conditions, such as traumatic brain injury, stroke, and altered mental status associated with other trauma and other conditions such as epilepsy, dementia or non-epileptic seizures. Services include bedside exams, more formal neuropsychological examinations/testing, physician and staff education/training regarding behavioral aspects of management of acute conditions, recommendations for ongoing rehabilitation and (for epilepsy surgery candidates) sodium amytal/Wada procedures and cortical mapping. Children seen are typically followed during

their stay at Children's Rehabilitation Center. Available outpatient services include follow-up visits/consultations for patients who are seen initially as inpatients for the conditions noted above, along with other requests for evaluation and treatment of post-acute TBI and stroke, dementia, learning disorders and other disruptive behavior disorders affecting academic performance.

Adult-Focused Rotations

Administrative Mini Rotation, Dr. Parker: This rotation aims to help interns prepare for the administrative roles that will be part of their careers. The rotation provides an overview of current administrative, strategic, and performance improvement initiatives and issues in the Department of Psychiatry. Interns will select a focus or project from among these options – hopefully one that will have them most generalizable benefit. Interns will also have the opportunity to observe additional administrative activities by shadowing Dr. Parker in meetings.

Adult Inpatient Rotation, Dialectical Behavioral Therapy Skills Emphasis, Dr. Bagge: The goal of this rotation is to learn how to assess and provide brief interventions, targeting emotional and behavioral dysregulation, among patients housed within an acute care psychiatric unit, the emergency department, or a medical floor.

There is a special emphasis on the assessment of emotional and behavioral dysregulation broadly (e.g., mood, anxiety, impulse control, substance use problems, and suicidal behavior). To target this dysregulation, intervention skills training primarily focuses on teaching patients Dialectical Behavioral Therapy skills within the domains of mindfulness, interpersonal effectiveness, emotion regulation, and distress tolerance. Training on the use of additional empirically-supported acute and/or crisis interventions (e.g., DBT chain analysis/solutions; suicide safety planning, distress coping plans, behavioral activation, and brief cognitive-behavioral interventions) are also offered. Psychology residents may use Screening, Brief Intervention, and Referral to Treatment (SBIRT) to identify, reduce, and prevent problematic substance use and Substance Use Disorders (SUD), and will have the opportunity to provide in vivo supervision/coaching to medical trainees. Additionally, specific DBT skills, developed for those with SUDs (e.g., alternate rebellion), can be taught to patients whose use of drugs is associated with emotional dysregulation.

The resident will interact with mental health providers from a variety of disciplines (e.g., psychiatry, social work, and internal medicine). By participating in rounds on the psychiatric inpatient units, the psychology resident will learn how to engage in a multidisciplinary treatment team. The resident will provide consultation to the treatment team on devising coping distress plans and ensuring a safe environment post discharge (e.g., means restriction), teaching of coping skills, and provision of psychoeducation to those with emotional and behavioral dysregulation to increase successful linkage to outpatient cognitive behavioral treatment. Psychology residents may also have opportunities to create and lead a cognitive-behavioral group for patients with emotional and/or behavioral dysregulation. For instance, previous residents have created one-session group treatments focused on management of anger, progressive muscle relaxation for acute anxiety, sleep problems, and distress tolerance/crisis survival skills.

The primary sites of this rotation are the two locked adult psychiatric units at UMMC (7-East and 7-West). The psychology resident will also have the opportunity to assess and treat psychiatric patients within the emergency department and medical floors through the psychiatry consult liaison service. At all of these sites, the resident will have the opportunity to work with underserved populations. This rotation is offered either as a full or half-time four-month rotation.

Adult Inpatient Rotation, Substance Use Disorder Emphasis, Dr. Williams: The goals of this rotation are to learn how to assess and treat individuals as part of an interdisciplinary psychiatric team within an acute care inpatient psychiatric unit. Training takes place on two locked adult inpatient psychiatry units at UMMC. The intern works closely with the inpatient psychiatry team and serves as the psychology consultant on the unit. Given the high prevalence of substance abuse within acute psychiatry populations, there is a special emphasis on the assessment and treatment of substance use and co-occurring disorders. Interventions for substance use include Screening, Brief Intervention, and Referral to Treatment (SBIRT), Motivational Interviewing, and brief

cognitive behavioral therapy. The intern also provides psychology-specific consultation to the treatment team. This includes experiences such as completing integrated assessment reports for diagnostic clarification, psychoeducation about psychological treatments, brief interventions (e.g., relapse prevention plans), and in-service training to medical students and psychiatry residents. The intern will participate as an important member of the treatment team and gain exposure to an interdisciplinary approach to psychiatric treatment.

Community-Based Dual Disorder Rotation, Dr. Schumacher (primary supervisor), Drs. Cunningham, Williams, and Coffey (Consultant): The goal of this rotation is to learn how to treat mental illness that co-occurs with substance use disorders. The primary focus is on evidence-based treatment of mood, trauma-related, and anxiety disorders, particularly the treatment of PTSD using prolonged exposure, the treatment of depression using behavioral activation, and transdiagnostic treatment of emotion dysregulation with dialectical behavior therapy skills, with the opportunity to also acquire advanced skills in motivational interviewing. There also are opportunities to treat anxiety and mood disorders such as social anxiety, generalized anxiety, panic, and bipolar disorder using a variety of evidence-based protocols. There are opportunities to complete evaluations of clients, to prepare integrated reports, and to make recommendations to the substance abuse treatment team. The clinical experiences take place within a community-based residential substance abuse treatment program (18-minute drive from the UMMC campus). Therefore, the intern will not only learn how to treat co-occurring disorders, but also how to participate in a multidisciplinary treatment team with fellow professionals who may have different treatment philosophies and values. Opportunities to train staff in cognitive behavioral treatment approaches, to provide general program consultation to the community-based program, and clinical supervision to doctoral students may also be available. Given that these community-based programs are major recruitment sites for Drs. Coffey and Schumacher's NIH-funded grants and other research projects, interns will also learn how to establish and maintain mutually beneficial relationships with community treatment providers. Given the importance that the National Institutes of Health have placed on testing psychological treatments in "real-world" settings, interns interested in conducting research in community settings may benefit from experiences gained on this rotation.

Helping HAND Rotation, Dr. Parker: Interns will have the opportunity to provide individual substance use disorder treatment co-located in the Department of Medicine's Adult Special Care Clinic, a sub-specialty medical clinic for individuals living with HIV/AIDS. Helping HAND is a SAMHSA-funded initiative that identifies patients with substance use disorders through use of Screening, Brief Intervention, and Referral to Treatment (SBIRT). As appropriate, individuals are referred for motivational, behavioral, and cognitive-behavioral treatment within the sub-specialty clinic. Medication Assisted Treatment and pharmacotherapy for comorbid psychiatric conditions will be coordinated with the Department of Psychiatry's Behavioral Health Specialty Clinic as well as through referral to collaborating community agencies. The Intern will have the opportunity to participate in all phases of this program.

Methodist Rehabilitation Hospital Neuropsychology/Behavioral Medicine Rotation, Dr. Evans (primary supervisor) and Drs. Adams: The goal of this rotation is to provide residents with supervised assessment and treatment of clinical cases in a rehabilitation setting. Experiences include consultation on inpatient brain-injury, stroke, general orthopedic, and spinal cord injury services. Resident will learn to conduct bedside neuropsychological evaluations for TBI, stroke, anoxic brain injury, and brain tumor patient populations utilizing formal instruments such as 3MS, MOCA, CAP/GOAT, ABS, CRS and MAST to monitor patient change over time and report findings in the medical record. Resident will learn to conduct and interpret formal neuropsychological evaluations and provide recommendations given in these types of settings. Resident will be supervised and trained in giving patient and family feedback on both formal and informal evaluations. They will also be actively monitoring mood/emotional adjustment in patients, and there are opportunities for providing psychotherapy and behavioral interventions. Residents will participate in weekly staffing for inpatient consults and work with treatment team members on specific behavioral or emotional issues. There is opportunity for involvement with family conferences for provision of test results and education regarding course of recovery.

Neuropsychology Rotation, Dr. Manning (See Rotation Description Above)

Curriculum:

Practice and Dissemination Curriculum

Beginning in 2008 with generous funding from the National Institute on Drug Abuse (R25DA026637, PI: Julie A. Schumacher, *Program of Excellence in Practice and Dissemination of Motivational Interviewing*), the UMMC Training Program began development and implementation of our Practice and Dissemination Curriculum. The curriculum was developed in response to increasing awareness of Training Program faculty that dissemination and implementation of evidence based behavioral treatments remains a major challenge for researchers, professional organizations, and federal and state agencies.

Despite the discovery of several promising therapeutic interventions for a variety of disorders, the gap between research and practice still exists and many practitioners continue to rely on treatments supported only by anecdotal and idiographic evidence. Further, although many facilities and practitioners base their treatment philosophy on evidence based practices, the treatment provided may bear little to no resemblance to actual evidence-based practices.

We believe that research oriented doctoral training programs, internship programs, and postdoctoral fellowship programs in psychology currently represent an important mechanism through which evidence based behavioral practices are disseminated. However, many of these programs, including our own Training Program, specialize in training individuals who seek to become academic psychologists rather than full-time practitioners. Thus, our Practice and Dissemination Curriculum is designed to foster broader dissemination and implementation of evidence based behavioral treatments by these programs.

All interns participate in this four-part curriculum, which unfolds over the course of the training year, and includes: 1) in-depth classroom instruction in an evidence-based behavioral treatment; 2) an intensive competency-based practicum experience in the evidence-based behavioral treatment that continues until a predefined standard of expertise is achieved; 3) in-depth class training in the dissemination of the evidence based treatment; and 4) a community practicum during which teams of interns provide a workshop and follow-up supervision/consultation to providers at local agencies and facilities under the supervision of Training Program faculty.

The intent of this curriculum is to foster ongoing dissemination and implementation of evidence based practices in the state of Mississippi and beyond, by: 1) fully integrating the curriculum into our training program, 2) instilling a desire for further dissemination and implementation work in our trainees, and 3) disseminating the curriculum as a model for training. The focus of this curriculum from 2008-13 was motivational interviewing for substance use disorders, from 2013-2016 it was exposure-based treatment for posttraumatic stress disorder, and from 2016-20 will focus on Screening, Brief Intervention, and Referral to Treatment (SBIRT) for substance use disorders.

Seminars and Grand Rounds

The UMMC Training Program offers a series of seminars that cover a broad range of topics, including professional development, grant writing (See Research Opportunities below for more information), assessment and treatment approaches with specific populations, neuropsychology, psychopharmacology, research methodology, legal and ethical issues, cultural diversity, and supervision. A Research Rounds/Case Presentation series is presented by interns and post docs. Interns are expected to present a job talk during the fall and a clinical case in the spring to fellow interns, post docs, and faculty. Finally, many other seminars, rounds and informal presentations offered by other departments are open to our trainees.

The UMMC Psychology Internship Training Program has a strong reputation for providing excellent professional development seminars aimed at psychology interns who intend to have an academic/research career. The professional development seminars include topics that range from negotiating salaries and start up packages to purchasing one's first house to work/life balance.

Internship Faculty for the 2019-2020 Internship Year:

- Robert Adams, Ph.D., Neuropsychologist, Methodist Rehabilitation Center (Methodist Rehabilitation Hospital Neuropsychology/Behavioral Medicine Rotation)
- Robert Annett, Ph.D., Professor, Vice Chair for Research, Department of Pediatrics, Division of Child Development (CAY Rotation)
- Courtney Bagge, Ph.D., Associate Professor, Department of Psychiatry and Human Behavior (Adult Inpatient Rotation, DBT Skills Emphasis)
- Danny Burgess, Ph.D., Associate Professor, Department of Psychiatry and Human Behavior (GPC Supervisor)
- Scott Coffey, Ph.D., Professor Emeritus, Department of Psychiatry and Human Behavior (Consultant Community Based Dual Disorder Rotation)
- Sarah Cunningham, Ph.D., Assistant Professor, Department of Psychiatry and Human Behavior (Community Based Dual Disorder Rotation)
- David Elkin, Ph.D., Professor, Executive Director, Center for Advancement of Youth, Department of Psychiatry and Human Behavior (CAY Rotation)
- Clea Evans, Ph.D., Director of Neuropsychology, Methodist Rehabilitation Center (Methodist Rehabilitation Hospital Neuropsychology/Behavioral Medicine Rotation)
- Cynthia Karlson, Ph.D., Assistant Professor, Department of Pediatrics, Division of Hematology/Oncology (Pediatric Psychology Rotation)
- Crystal Lim, Ph.D., Assistant Professor, Psychology Residency Training Director, Department of Psychiatry and Human Behavior, (Pediatric Psychology Rotation, GPC Supervisor)
- Edward Manning, Ph.D., Professor, Department of Neurology (UMMC Neuropsychology Rotation)
- Jefferson Parker, Ph.D., Associate Professor, Vice Chair of Clinical Affairs, Department of Psychiatry and Human Behavior (Administrative Mini Rotation)
- Dustin Sarver, Ph.D., Assistant Professor, Department of Pediatrics, Child Development (CAY Rotation)
- Julie Schumacher, Ph.D., Professor, Vice Chair of Education, Department of Psychiatry and Human Behavior (Community Based Dual Disorder and Adult Inpatient Rotations)
- Monica J. Sutton, Ph.D., Associate Professor, Department of Pediatrics, Child Development (CAY Rotation)
- Daniel C. Williams, PhD, Associate Professor, Psychology Residency Vice Training Director, Director Division of Psychology, Department of Psychiatry and Human Behavior (Adult Inpatient, Substance Use Disorders Emphasis and Community Based Dual Disorder Rotations)

Research Opportunities:

While clinical training activities play a paramount role in our program, interns are expected to maintain active involvement in research, which is consistent with our scientist-practitioner model. To fulfill the core research competency requirement, it is expected that each intern will complete a research project during the course of the training year. To accomplish this goal interns are paired with a research preceptor who is a faculty member or affiliate faculty member from UMMC who is actively involved in a program of research. Prior to the start of the training year interns are matched with a faculty member whose research interests and experience are consistent with the interests or goals of the intern. These assignments are based primarily on intern rankings, as well as the availability of research preceptors. At the beginning of the training year it is expected that interns will develop a research plan for the year in consultation with their research preceptor and that throughout the year they will develop and plan a research project, carry out the research, and disseminate research findings. Interns are provided with protected research time each week and are expected to use that time for Program-related research including but not limited to submission of a first-authored publication or an equivalent research product under the supervision of Training Program faculty during the training year. There is considerable flexibility in the content, scope, and focus on research projects completed by interns; however, it is expected that it will consist of a project independent of the dissertation and consist of a first-authored manuscript submission or similar product. A high percentage of former psychology interns have authored or co-authored multiple publications based on their research activities during the internship year. Interns from recent cohorts had an average of 3.1 (1.7) submitted/in press peer-reviewed publications with Training Program faculty during the training year and 5.1 (2.4) total research projects during the course of the year. This number does not reflect additional

publications interns submitted/published with their graduate school mentors. To facilitate achievement of these research goals and expectations, interns receive an average of at least 8 hours of protected research time per week: 4 hours of weekly protected research time and an average of 4 or more hours per week that is negotiated with rotation supervisors. Failure to meet research expectations will not result in failure of the internship program (as long as the intern achieves a rating of at least high intermediate on the Scientific Knowledge and Methods and Research/Evaluation domains), but may result in intern protected research time being reassigned to meet other training goals. The Research Oversight Training Committee oversees the monitoring of progress on research-related competencies and helps to facilitate a modified research plan in the rare instance that an intern's research time is reassigned due to insufficient progress.

Didactics on grantsmanship are part of the internship training experience and all interns are expected to participate in this seminar series. The grant writing seminar is a 12 session series led by Training Program faculty members who have a strong history of attracting NIH funding and have considerable experience reviewing NIH grants. Interns are encouraged to begin, and perhaps complete, a draft of their own independent grant by the end of the internship year.

Significant resources are available to support research training activities. PCs are easily accessible with primary software packages including MS Office (Word, PowerPoint, Excel), STATA, SAS, and SPSS among others.

Laboratory and A/V equipment include psychophysiological assessment and biofeedback equipment, video recorder/playback systems, DLP projectors, etc. Online survey and data management services are available through Qualtrics and REDCap. The Rowland Medical Library offers excellent facilities and receives all major psychology journals; in addition, the vast majority of these journals are available electronically. The capacity for database searches Medline, ERIC, CINAHL, HEALTH, PsychINFO and PsychLit (Psychological Abstracts) is available on-site and remotely.

Research Preceptors for 2019-2020 Internship Year:

Robert Annett

- **Research:** Chronic childhood disease and treatment's impact on neuropsychological functioning and quality of life; adolescent decision making for clinical research; pediatric asthma and child CNS functioning; pediatric cancer and child CNS functioning; stress biomarkers and child neuropsychological function; developmental screening; genome wide association research and neurobehavioral function; cortical maturation (assessed with MEG) and brain development in term and preterm infants.
- **Experience with extramural funding:** PI and Co-I on NIH grants (NICHD, NHLBI, CDC, AHRQ); PI for foundation grants; study section NIDDK, NICHD, and ALSF.

Courtney Bagge

- **Research:** Validation of acute factors posing imminent risk for suicide attempt (i.e., warning signs); substance use disorders, personality, and borderline personality disorder; serotonergic genes and distinct impulsivity processes relating to suicide attempts; statistics and psychometrics (measure development).
- **Experience with extramural funding:** PI on several large NIH grants; PI on a large multi-site Department of Defense grant; PI on a foundation grant; NIH LRP recipient.

Scott Coffey

- **Research:** Treatment of co-occurring PTSD and substance use disorders (SUD); the role of negative emotion in substance craving; impulsivity and emotional dysregulation; dissemination of evidence based psychotherapies; and the impact of large scale disasters on psychological health. Opportunities for original data collection, as well as data sets for secondary analysis are available in these areas.
- **Experience with extramural funding:** PI and Co-I on NIH and SAMHSA grants, LRP recipient and supervisor for 3 LRP recipients, F32 Co-Sponsor, and grant reviewer for NIH Center for Scientific Review and NIAAA.

Cynthia Karlson

- **Research:** Chronic pain in children and adolescents; influence of mood and sleep disturbance on chronic pain symptoms in children and adolescents; biopsychosocial and family factors in chronic pain and adjustment to chronic illness; biopsychological interventions for chronic pain; neurocognitive functioning in pediatric oncology and sickle cell disease; health disparities and impact of socioeconomic status on outcomes in pediatric oncology and sickle cell disease.
- **Experience with funding:** PI on NIH KL2 subaward, PI on Foundation grants, PI on Intramural and Intradepartmental grants, Grant submissions (e.g., Foundations, NIH/NCI K07) as PI and Co-PI.

Crystal Lim

- **Research:** Development and evaluation of pediatric obesity family-based behavioral weight management interventions; examining psychological (e.g., anxiety, depression, ADHD, etc.) and physical co-morbidities associated with pediatric obesity, as well as issues related to diversity and health disparities and culture and family factors that intersect with engagement in health behaviors; program evaluation of a multidisciplinary pediatric obesity clinic; development and evaluation of technology-based interventions for the treatment of pediatric obesity
- **Experience with funding include:** PI on NIH/NHLBI NRSA and Internal Grant; Co-I on SAMHSA, HRSA, and Internal Grants; Grant submissions (e.g., R21, R01, K23) as PI and Co-PI to multiple NIH institutions (e.g., NICHD, NIDDK, NHLBI), NIH supported (Mid-South TCC, MCCTR), and foundational mechanisms.

Jefferson Parker

- **Research:** Use of contingency management to enhance abstinence and participation in substance use disorder continuing care, early and brief interventions for substance use disorders, issues in mental health services delivery (wait lists, no shows/cancellations, patient flow).
- **Experience with Funding:** VA Quality Enhancement Research Initiative (QUERI), VA Health Services Research and Development (VA HSR&D), South Central Mental Illness Research and Education Clinical Center (MIRECC).

Dustin E. Sarver

- **Research:** Dr. Sarver's research interests are in the developmental psychopathology of ADHD and externalizing disorders, primarily in children. His research program aims to have a translational scope, and ranging from understanding neurocognitive dysfunction, and characterizing patterns of various functional impairment areas, and understanding physiological, cognitive, parenting, and contextual influences on behavioral treatments for ADHD and externalizing behavior. On the applied end, his clinical research is recently aimed at evaluating behavioral intervention programs (e.g., PCIT, CARE) designed to facilitate continuums of care for disruptive behavior in the community.
- **Experience with funding includes:** State foundation and Intramural Grant PI; Co-I on national foundation (Simon's national SPARK autism genetic study) grant; Grant submissions (e.g., R21, R34, K12) as PI and/or Co-I to NIH institutions (e.g., NIMH), NIH-supported (CCTS, COBRE) and various national foundational mechanisms.

Julie Schumacher

- **Research:** Areas of active research include: etiology and treatment of substance use disorders and violence perpetration/victimization; behavioral self-regulation as a construct that underlies several problem behaviors; motivational interviewing; dissemination and implementation of evidence based psychotherapies. Opportunities for original data collection, as well as data sets for secondary analysis are available in these topic areas.
- **Experience with extramural funding includes:** PI on 3 NIH grants and one SAMHSA grant, LRP recipient and supervisor for 2 LRP recipients, F32 Primary Sponsor, and grant reviewer for NIH Center for Scientific Review, NIAAA Special Emphasis Panels, and CDC National Center for Injury Prevention and Control.

Training Committees:

The internship program consists of various committees that oversee intern's experiences throughout the year.

Residency Training Committee

Chair: Crystal Lim

Vice Chair: Daniel Williams

Role: Functions as the oversight committee for the UMMC Psychology Residency Program. The RTC and its Subcommittees serve to provide oversight related to the clinical, research, and diversity elements of the residents' training experiences. Through ongoing tracking of Training Program activities and resident progress these subcommittees also help the RTC to ensure that competency benchmarks and training goals are achieved.

Clinical Training Oversight Committee

Role: Oversees and tracks intern's clinical training to ensure needs and goals are met over the course of the training year.

Research Training Oversight Committee

Role: Oversees and tracks intern's involvement in programmatic research and professional development activities to facilitate the development of competencies associated with success in academic clinical psychology.

Diversity Training Oversight Committee

Role: Assesses the internship training environment to ensure interns develop adequate competence relating to the consideration of and attention to issues of diversity in clinical, research, and professional development activities.

Current Interns and Postdoctoral Fellows:

Interns:

- Sunghye Cho (Pennsylvania State University)
- Ashley Cole (Oklahoma State University)
- Whitney Fosco (University at Buffalo/North Campus)
- Jeffrey Girard (University of Pittsburgh)
- Kaitlin Oswald (Eastern Michigan University)
- Joel Sprunger (Purdue University - W. Lafayette)

UMMC Postdoctoral Fellow:

- Jami Gauthier, Ph.D.

Application and Interview Process:

Eligibility:

Doctoral students in APA-accredited Clinical or Counseling Psychology programs, who have accrued a minimum of 500 hours of documented, psychologist supervised direct client contact hours through a combination of therapy and assessment experience as verified by the training director of the doctoral program, are eligible to apply to the internship program. All coursework required for the doctoral degree must be completed prior to the start of internship, as well as any qualifying, comprehensive, or preliminary doctoral examinations. We prefer candidates whose doctoral dissertations will be completed, or at least well under way, before the beginning of the internship year. In addition, we are interested in applicants who desire to become licensed psychologists and seek employment in academic and other clinical research settings. Applicants who are not currently registered in a clinical or counseling psychology PhD program must include a letter from the director of a clinical or counseling program stating that their training and practicum have been equivalent to a PhD program in clinical or counseling psychology. As an equal opportunity training program, the internship welcomes and strongly encourages applications from all qualified candidates, regardless of gender, age, racial,

ethnic, sexual orientation, disability or other minority status.

Application Procedure:

We utilize the AAPI Online. The program application can be completed online at www.appic.org. Applicants are required to submit: 1) a completed AAPI, 2) three letters of recommendation, 3) a current Vita, and 4) a transcript from all graduate programs attended. No additional materials are required. **The application deadline is November 1st.**

Although most of our applicants who have been offered internship slots have visited Mississippi, face-to-face interviews are not mandatory (i.e., interns have been selected without an interview). However, past interns have stressed the importance of the interview in their decision to select the UMMC psychology internship program.

Also, the selection committee would very much like to have the opportunity to meet prospective candidates. After we receive your application and letters from your mentors, we will let you know if you have been selected for an interview. Once you are selected, you will be assigned to a team of interns who will be responsible for coordinating your interview and assisting you in finding a place for you to stay while visiting Jackson. Also, please make every effort to introduce yourself to a faculty member while at upcoming conferences such as ABCT and NAN. We would like to be able to put a face to a name.

Notification of Acceptance:

As a member of the Association of Psychology Postdoctoral and Internship Centers (APPIC), the UMMC Training Program abides by the APPIC Policy on Internship Offers and Acceptances, and participates in the APPIC computer-matching program. No person at this training facility will offer, solicit, accept, or use any ranking-related information regarding any intern applicant.

Program Administrator:

Kristy Herbison, program administrator, is invaluable to our internship program. She is the program's primary contact person and keeps the program running. Please e-mail Kristy (kherbison@umc.edu) for information about the program, the application process, or with general questions about the program.

Administrative Policies and Procedures:

Financial Support:

Interns accepted to the UMMC Psychology Internship Training Program are paid a minimum of \$24,843 and receive the state financial health insurance plan, which is covered in their pay. During the training year interns accrue 18 days of leave, 13 days of which are designated vacation or personal leave and 5 days of leave to pursue employment opportunities. Additionally, there are 10 paid holidays and professional leave time is available to attend conferences and for other professional experiences.

Internship Year:

The internship year begins on July 1, and is for a full year, through June 30.

Due Process Statement:

Upon entry to our program, interns receive a copy of our policy and procedures manual which includes information on grievance processes, disciplinary actions (including termination), and addresses issues pertaining to impaired interns. Please contact our program administrator Kristy Herbison (kherbison@umc.edu) to request a copy of our policy and procedures manual.

Equal Opportunity:

The University of Mississippi Medical Center adheres to the principle of equal education and employment opportunity without regard to race, sex, color, religion, marital status, age, national origin, disability or Veteran status. This policy extends to all programs and activities supported by the Medical Center. Under the provisions of Title IX of the Educational Amendments of 1972, the University of Mississippi Medical Center does not discriminate on the basis of sex in its educational programs or activities with respect to admissions or

employment.

Trainee Admissions, Support, and Outcome Data

INTERNSHIP PROGRAM TABLES

Date Program Tables are updated: August 15, 2017

Internship Program Admissions

Description of Applicant Selection:

Eligible applicants for the UMMC Psychology Internship Program are doctoral students in APA-accredited Clinical or Counseling Psychology programs. All coursework required for the doctoral degree must be completed prior to the start of internship, as well as any qualifying, comprehensive, or preliminary doctoral examinations. We prefer candidates whose doctoral dissertations will be completed, or at least well under way, before the beginning of the internship year. In addition, we are interested in applicants who desire to become licensed psychologists and seek employment in academic and other clinical research settings.

Does the program require that applicants have received a minimum number of hours of the following at time of application?

<i>Total Direct Contact Intervention Hours</i>	No	Yes	<i>Amount</i> N/A
--	-----------	-----	----------------------

<i>Total Direct Contact Assessment Hours</i>	No	Yes	<i>Amount</i> N/A
--	-----------	-----	----------------------

Describe any other required minimum criteria used to screen applicants:

Though we do not require a minimum number of assessment or intervention hours we seek applicants who have accumulated at least 500 total hours of direct clinical contact supervised by psychologists, through a combination of therapy and assessment experience during their graduate training and which are verified by their Director of Clinical Training.

Financial and Other Benefit Support for Upcoming Training Year

<i>Annual Stipend/Salary for Full-time Interns</i>	\$24,843
--	----------

<i>Annual Stipend/Salary for Half-time Interns</i>	N/A
--	-----

<i>Program provides access to medical insurance for intern?</i>	Yes	No
---	------------	----

If access to medical insurance is provided:

<i>Trainee contribution to cost required?</i>	Yes	No
---	-----	-----------

<i>Coverage of family member(s) available?</i>	Yes	No
<i>Coverage of legally married partner available?</i>	Yes	No
<i>Coverage of domestic partner available?</i>	Yes	No
<i>Hours of Annual Paid Personal Time Off (PTO and/or Vacation)</i>		144
<i>Hours of Annual Paid Sick Leave</i>		96
<i>In the event of medical conditions and/or family needs that require extended leave, does the program allow reasonable unpaid leave to interns/residents in excess of personal time off and sick leave?</i>	Yes	No
<i>Other Benefits:</i>		
5 days available for professional development activities, 10 paid holidays		

Initial Post-Internship Positions

The following table provides information regarding post-internship positions for the last three cohorts (training years 2014-2015 through 2016-2017) who graduated from our internship training program.

Training Years 2014-2017

Total # of interns who were in the 3 cohorts 31

Total # of interns who did not seek employment because they returned to their doctoral program/are completing doctoral degree 0

Work Setting	<i>Post-Doctoral Position</i>	<i>Employed Position</i>
Community mental health center	0	0
Federally qualified health center	0	0
Independent primary care facility/clinic	0	0
University counseling center	0	0
Veterans Affairs medical center	2	0
Military health center	0	0
Academic health center	8	0
Other medical center or hospital	7	0
Psychiatric hospital	0	0
Academic university/department	0	5
Community college or other teaching setting	0	0
Independent research institution	9	0
Correctional facility	0	0
School district/system	0	0
Independent practice setting	0	0
Changed to another field	0	0
Not currently employed	0	0
Other	0	0
Unknown	0	0

Note: During training years 2014-2015, 2015-2016, and 2016-2017 the training program was operating as a consortium with the G. V. (Sonny) Montgomery VA Medical Center. Beginning with training year 2017-2018 the UMMC Psychology Internship Program began operations as an independent program.

Cultural/Recreational Resources:

The Jackson metro area and Mississippi have a rich cultural history. Outside of the Training Program, there are a number of local community-based organizations promoting diversity. Additionally, there are a number of cultural events that occur throughout the year and numerous recreational opportunities available.

LGBTQ Resources:

HRC-Mississippi <http://www.hrc.org/states/mississippi/>

Mississippi Pride

SPECTRUM, Gay Straight Alliance located at Jackson State University, Jackson

Unity Mississippi
